

ABSTRACT OF THE DISCLOSURE

5 A remote control multimedia content listing system for providing an updated
content listing of various media within a remote control. The remote control
multimedia content listing system includes a remote control having a housing, a
display, a keypad, and an electronic system for receiving configuration data from a
control station via a global computer network (e.g. Internet). The user may enter media
10 information into the electronic system thereafter uploading the media information to the
control station. The control station analyzes the uploaded media information and
transmits the appropriate configuration data to properly configure the electronic system
to provide a usable "guide" for the media. The user may also access a web site of the
control station and manually enter the media information after which the control station
15 sends the appropriate configuration data to the electronic system. The electronic
system also preferably receives automatic updates of the configuration data when
connected to the control station via the Internet for maintaining an updated multimedia
listing.
